

DIGIPOS SYSTEMS: THE RETAIL INDUSTRY'S 'SUPPLIER OF THE YEAR'

'Supplier of the Year 2006'

In June 2006 DigiPoS systems was acknowledged as 'Supplier of the Year' at the European Retail Solutions Awards. This award gives leading Retail CEOs and IT Directors the opportunity to vote for the supplier that they feel delivers to the industry across a range of criteria, including product innovation, service and reliability.

In just a few years thousands of DigiPoS Systems have been installed right across the Retail sector culminating in the award winning Retail Blade system being selected by many of Europe's highest profile Retailers. In the simplest terms this high performance system increases in-store productivity whilst driving down the cost of ownership. However, closer inspection shows this leading edge technology also delivers far more in terms of reliability, flexibility and ease of maintenance.

The DigiPoS Retail Blade Range

The Retail Blade system is available in a range of specifications tailored to meet the needs of individual retailers and store requirements. In each case the central motherboard, or hard drive of the systems have been designed to be upgraded in less than 60 seconds, a simple in-store operation that maximises up-time whilst reducing the cost of maintenance. The DigiPoS Blade System has been specifically designed for Retail, and therefore also has one of the highest levels of connectivity and retail specific functionality to be found.

The DigiPoS Retail Blade Server

The DigiPoS Blade Server delivers high performance RAID technology right to the store, and provides the confidence of a back-office server solution operating on exactly the same technology platform as the balance of the EPoS estate. Dual hard drives ensure that important store data is centralised in store and then backed-up for security and full analysis of PoS transactions. Running on a Intel P4 2.8ghz chip the high performance Retail Blade Server maximises the use of twin 80GB (standard but upgradeable) S-ATA drives with on board RAID mirror.
