Peace of mind retailing

DigiPoS Systems: Proud to be first...

DigiPoS Systems is proud to be the first in the industry to deliver a purpose built design that addresses the real needs of retailers in a time when technology life cycles are getting shorter, more complex and costly. DigiPoS Retail Blade means longer useful life for retailer's POS investments; more options; greater flexibility and, most importantly, a better return on investment (ROI). The DigiPoS Retail Blade marks a radical departure from traditional point of sale solutions, delivering an extended life cycle, flexibility, openness, power management, supremely rugged construction, and a simple service design.

The Retail Blade

The DigiPoS Retail Blade 10 Year Plan

“ The revolutionary DigiPoS Retail Blade concept, based on Blade Server technology, is a unique solution for Retailers concerned with not only today, but also tomorrow’s technology needs.”

The principle behind Blade Technology is efficiency: The Retail Blade host becomes the foundation of the system and, from a range of options, a separate Retail Blade motherboard is installed in the host.

The Retail Blade solution is the only product available with a full ten year extended life plan, based around the Retail Blade Host 10 year warranty, and DigiPoS Systems is committed to developing a comprehensive range of Retail Blade motherboards over the next decade. As more functionality is required at the Point of Sale, applications become more and more resource intensive - the scalable Retail Blade architecture can grow to meet the software needs. Therefore technology purchased today does not become redundant; it is simply and effectively upgraded to the latest performance Blade, increasing Return on Investment and eliminating the ‘Rip and Replace’ cycle.

Key features include:

- **Retail Blade 10-year plan** — platform stability enabling Retailers to extend the performing life of the POS investment Beyond a Full Decade.
- **Simple Maintenance** — the ease of maintenance, installation, and upgrades, combined with spares availability and warranties ensure significantly reduced costs of maintenance.
- **Intelligent Power Management** — powered serial and USB ports protected with POLYFUSE technology safeguards against damage from electrical spikes and noise.
- **High-End Performance** — along with platform stability, the Retail Blade runs the latest technology at the heart of its design, supporting Intel Pentium CPU’s beyond 3.0GHz.
- **DigiPoS GSM** — a remote Diagnostics facility designed to identify hardware faults before downtime occurs enabling correct and decisive engineering deployment.
- **Industry Leading Warranties** — 10 Year Host Warranty, 5 Years Spares Availability, and 3 Year Processor and Peripheral Warranties.
- **“Microsoft Partner of the Year Award: OEM Hardware — Product Innovation”**
